Profile

Principal Software Engineer with 5+ years shipping production systems end-to-end in TypeScript — NestJS backends, React/Next.js web, and React Native mobile — across automotive, healthcare, and fintech. Architects multi-tenant SaaS and AI/LLM features on AWS, leads and mentors teams, and owns system design, technical hiring, and CI/CD.

Technical Skills

Languages: TypeScript, JavaScript, SQL

Backend: NestJS, Node.js, Express.js, Microservices, Clean Architecture/DDD, Multi-tenant SaaS, REST & GraphQL, Prisma & Sequelize ORM

Databases & Messaging: PostgreSQL, MySQL, MongoDB, Redis, BullMQ (queues), Pusher (real-time), Elasticsearch

Security: JWT, OAuth, Keycloak, MFA (TOTP/OTP), RBAC, audit logging

Testing: Jest, Vitest, Playwright, supertest, E2E

Frontend: React, Next.js, React Native (Expo), Nuxt.js, Redux/RTK, Zustand, TanStack Query/Router, Tailwind/NativeWind, GraphQL

AI / LLM: OpenAI (GPT-4o), LangChain/LangGraph, RAG & embeddings, AI agents (n8n)

Cloud & DevOps: AWS (ECS Fargate, EC2, S3, CloudFront, SES, ElastiCache, Aurora), Vercel, Docker, CI/CD (GitHub Actions, Bitbucket Pipelines), EAS

Integrations: Reynolds & Fortellis (Automotive DMS), Stripe, RevenueCat, Persona (KYC), CometChat, HealthKit/Health Connect, Google Maps

Professional Experience

CodingCops

Principal Software Engineer

04/2026 – Present

- Architect and technical owner of **StaffMaster**, Relay's staff-scheduling product — recurring-events engine (edit single vs. all occurrences), rotation/fixed auto-scheduler, open-swap approval flows, blackout/holiday/min-staffing rules, per-employee shift-time overrides, and a grouped day-roster aggregation API.
- Designed a multi-phase **admin-impersonation audit system** ("View Dashboard") — adminActorId audit columns across 18 mutation tables, an actor-context resolution layer, and tamper-proof attribution wired through 9+ creation paths to prevent employee-ID spoofing.
- Lead a **second product in parallel — Fittish**, an AI fitness & nutrition app (NestJS + Expo): AI-generated plans, an **LLM nutrition-extraction pipeline** (OpenAI + Tavily), HealthKit / Health Connect sync, and Stripe + RevenueCat subscriptions.
- Scaled infrastructure & delivery — split Reynolds DMS ingestion into a standalone producer/consumer worker with S3 forensic retention; stood up EAS (iOS/Android) and migration-gated ECS deploy pipelines.
- Lead a **team of 4** — 200+ merged PRs across backend & web in a quarter, daily code review, mentorship, technical estimations, and SSE/SE/ASE hiring interviews.

Senior Software Engineer

10/2024 – 04/2026

- Architected **Relay Automotive V2** from the ground up — a multi-tenant SaaS (NestJS, Prisma, PostgreSQL) serving 9 dealership roles — and migrated the legacy MERN codebase, cutting technical debt.
- Built the **DMS integration layer** abstracting Reynolds (SOAP/BOD) and Fortellis (REST) behind common ports with per-dealership runtime resolution; ingested deal webhooks via gzip-batched S3 + **BullMQ** workers with retries and idempotency.
- Delivered both clients to feature parity — React/Vite web (TanStack Router/Query, Zustand) and React Native (Expo) mobile with geofencing, biometric auth, and OTA updates.
- Implemented auth & security — JWT with TOTP/email-OTP **MFA**, role and dealership-scope guards; real-time dashboards over **Pusher**.
- Laid **Fittish's foundation** — clean-architecture NestJS backend, first AI plan-generation flow, and Apple HealthKit integration.
- Owned cloud delivery — migrated web hosting to **S3 + CloudFront**, ran the backend on **AWS ECS Fargate**, ~2 staging→prod releases/month via Bitbucket CI/CD with Jest + E2E.

The Hexaa

Senior Software Engineer

04/2023 – 10/2024

- Led & delivered three contract-based projects (Nuxt.js, React.js, React Native).
- Managed a long-term contract transitioning a project from MVP to investment-ready.
- Revamped an existing system into microservices using Next.js, Keycloak, Beanstalk, Elasticsearch.
- Provided strategic technical insights to the BD team and hiring process.
- Led the development of in-house projects, including a healthcare system & granting platform.

Software Engineer

03/2022 – 04/2024

- Developed a multi-tenant SaaS with Sequelize ORM & Stripe integration.
- Built an admin panel for trip management with automated data updates & RBAC.
- Implemented live driver tracking via Google Maps API.
- Led a team of 5 developers & 1 QA to build a food subscription platform with Stripe payments.

Associate Software Engineer

03/2021 – 03/2022

- Developed an admin panel for multi-vendor management.
- Implemented inventory handling using Redux & optimized frontend performance.
- Integrated payment systems, order tracking & automated notifications.

Projects

Relay Automotive (React, React Native, NestJS, Prisma, PostgreSQL)

01/2025 – present

- Architected a multi-tenant V2 SaaS (NestJS, Prisma, PostgreSQL) serving 9 dealership roles; migrated the legacy MERN codebase to cut technical debt.
- Built automotive DMS integrations (Reynolds/Fortellis) with BullMQ workers and real-time Pusher dashboards.
- Shipped the React Native (Expo) mobile app to feature parity — geofencing, biometric auth, OTA updates.

- Lead a team of 4 with daily code review, mentorship, and technical estimations.

Fittish (NestJS, Expo, OpenAI/LangGraph, Stripe, RevenueCat) [↗](#)

01/2023 – 10/2024

- Led backend + mobile for an AI fitness & nutrition app generating personalized workout and meal plans.
- Built a meal/nutrition engine with HealthKit / Health Connect sync and LLM-powered food extraction (OpenAI + Tavily).
- Implemented Stripe + RevenueCat subscriptions and EAS + ECS CI/CD pipelines.

Polar Adventure (Next.js, Makeswift) [↗](#)

12/2022 – 10/2024

- Led front-end development of an expedition-cruise platform for Arctic & Antarctic tours.
- Integrated third-party cruise data and built an intuitive CMS-driven admin panel.
- Developed RBAC and bulk data management for efficient operations.

Education

Bachelor's degree, Computer Software Engineering, CUI [↗](#)

02/2017 – 01/2021
Lahore, Pakistan

Certificates

- AI Automation: Build LLM Apps & AI-Agents with n8n & APIs [↗](#)
- The Project Management Course: Beginner to PROject Manager [↗](#)
